PROFILE SUMMARY

MCA graduate with basic programming knowledge in Java, Python, HTML, CSS, and PHP, and a strong interest in cybersecurity. Skilled with Netdiscover, Nmap, Wireshark, and Packet Tracer for network exploration and analysis. Experienced in information gathering and basic vulnerability testing. Curious, adaptable, and motivated to grow in a role that allows me to apply both my security awareness and technical development skills.

SKILLS

- Programming Languages: Java, Python
- Web Development: HTML, CSS, PHP, SQL
- Databases: MySQL
- Cybersecurity Tools: Nmap, Netdiscover, Wireshark, Sqlmap, Kali Linux

INTERNSHIP

Cybersecurity Intern | Dlithe
Bengaluru, Karnataka
Information Gathering on an EduTech Website & IP Spoofing Demonstration Dec 2024 – Feb 2025

- Performed active and passive reconnaissance on a simulated EduTech server (DC-1 VM), using Nmap, Gobuster, Netdiscover, and WhatWeb to identify open ports, directories, and misconfigurations.
- I conducted IP spoofing experiments using Hping3 to craft and send spoofed packets and analyzed network traffic with Wireshark to understand packet behavior and security weaknesses.
- Demonstrated how attackers gather system information, discover hidden resources, and manipulate network packets, improving awareness of reconnaissance and spoofing attack vectors.
- Documented findings, attack steps, and mitigation recommendations to support internal cybersecurity training.

PROJECTS

Image-Based Seed Identification | Deep Learning Project *May 2025 – November 2025*

- Developed a lightweight CNN model in TensorFlow/Keras to classify multiple fruit and vegetable seeds with high accuracy.
- Prepared a custom dataset with preprocessing (resizing, normalization, augmentation) and optimized training using Conv2D, MaxPooling, Dense, and Dropout layers.
- Built a user-friendly prediction interface to upload seed images and get instant classification results with confidence scores.

NeuroPulse | Machine Learning Tool *July 2024 – November 2024*

- Designed a Python ML tool to assess mental health risks using Logistic Regression, SVM and Random Forest.
- Predicted anxiety, depression, and stress risks with high accuracy based on survey data.
- Analysed 100+ survey responses, providing real-time reports and personalized intervention recommendations.

E-commerce Website *September 2023 – November 2023*

- Created a full-stack e-commerce site using HTML, CSS, JavaScript, PHP, SQL, and MySQL, supporting 50+ products and user login/registration.
- Implemented order tracking features, enabling users to monitor the status of their purchases.
- Enabled admin functionality to manage 3+ inventory categories, streamlining backend operations.

EDUCATION

Master of Computer Applications CGPA 7.9/10
Mangalore Institute of Technology & Engineering, Moodabidre, Mangalore February 2024

CERTIFICATIONS

- Big Data Concepts – Infosys Springboard
- Python Digital Forensics – Infosys Springboard

ADDITIONAL INFORMATION

- Selected to present a project at the **KSCST (Karnataka State Council for Science and Technology)** competition.
- Participated in the National Level Hackathon organized by SAP.
